Re: UTLX -Cleco's Site Certification Program

Dear Mr. Marcotte:

In reference to your letter there is the capacity for a minimum of 150,000 gallons per day that is available for this site. The water main runs within 500 feet of the proposed site which is a 12" water main. It has a 2,160,000 gallons per day. The working pressure is 62 psi. There are three elevated storage tanks within the vicinity of this project site, one located at this site, which is a 500,000 gallon steel tank, one at Industrial Park Road, which is a 1,000,000 gallon tank, and another located on McKeithen Drive, which is a 1,000,000 gallon tank as well. There is a ground storage tank located on Hwy. 1, which is 1,000,000 gallon tank.

Our office has determined water service is available for the above-referenced project. Please be advised that the city ordinances require your site to either be in the city limits or you must obtain an exception through the City Council to receive water services. In addition, all City of Alexandria standards and requirements shall apply to the site and approach mains.

If we can be of any further assistance, please advise.

Sincerely, 

Daryl Bryant
Superintendent
City of Alexandria Water Department

Jacques M. Roy
Mayor
